The intracellular levels of many proteins are regulated by ubiquitin-dependent proteolysis. One of the best-characterized enzymes that catalyzes the attachment of ubiquitin to proteins is a ubiquitin ligase complex, Skp1-Cullin-F box complex contg.

Inducing Protein Degradation as a Therapeutic Strategy ...

Metabolomic analysis of human biospecimens had progressed quickly over the past decade. Technological and methodological advances have led to the comprehensive characterization of human serum, urine, cerebrospinal fluid and saliva metabolomes, and the creation of freely available metabolome reference databases.

A review on human fecal metabolomics: Methods ...

ErbB and Kinase activation. The four members of the ErbB protein family are capable of forming homodimers, heterodimers, and possibly higher-order oligomers upon activation by a subset of potential growth factor ligands. There are 11 growth factors that activate ErbB receptors.

ErbB - Wikipedia

A Particle may consist of an agglomeration of several crystallites. Therefore it is always greater than crystallite size. A crystallite in a true sense is a single crystal.

What is the difference between crystallite size, grain ...

Introduction. Bloating is one of the most common gastrointestinal (GI) symptoms, which is a frequent complaint in the patients of all ages. This symptom is very common in patients with irritable bowel syndrome (IBS) and other functional gastrointestinal disorders (FGIDs) as well as in patients with organic disorders.

Abdominal Bloating: Pathophysiology and Treatment
